Mar 24 MIDTERM EXAM 2 - DETAILS

Hi all,

The second midterm exam will be given on
Tuesday Mar 24, 3:50 pm-5:10 pm, in TIL 254 (usual class time and room).

The exam will be CLOSED TEXT, CLOSED NOTES.

You will write your answers in the given space on the exam paper, and will not be allowed to use extra sheets of paper. So please use a pencil (not pen) to write so you can erase and rewrite if you need to.

The exam will *primarily* cover material that was covered after the topics on the first midterm, i.e. from Feb 12 onward: UML, inheritance vs delegation, lambda expressions, equals method. The corresponding recitation problem sets are PS 4, PS 5 and PS 6.

Design Patterns and GUI/FXML will NOT be on the exam.

Since all of UML is based on object-oriented design and implementation, you are also expected to know foundational material on inheritance, interfaces, abstract classes, static and dynamic typing from earlier lectures.

You may be asked to write small code fragments to illustrate design principles.
